NAVI MUMBAI, INDIA

Product Management / AI Products / B2B SaaS / Consumer Products / FinTech

SUMMARY

Product Manager who ships solo, end to end, and uses AI to build data-driven products fast. Founded QRapid and grew its restaurant POS product to \$240,000+ (INR 2 crore+) in processed transactions, and shipped GeoIQ, a geospatial scoring layer behind millions of loan applications a year at ICICI Bank. Builds and engineers working AI-agent systems with Claude Code, working directly with customers to turn feedback into product, not just specs.

EXPERIENCE

QRapid | *Product Lead & Founder, VJTI TBI Incubated* Sep 2024 – Present | Mumbai, India

- Conceived, built, and shipped an AI-agent automation layer using n8n, Zapier, OpenAI API, and Claude API to run lead-qualification and partner-onboarding workflows end to end, replacing manual review steps; also launched TheROI.in, a content-led demand-generation engine for the Mumbai food and beverage sector.
- Founded and owned QRapid's restaurant POS and billing product end to end, from concept through data model to shipped UI, scaling it to \$240,000+ (INR 2 crore+) in processed transactions across partner restaurants.
- Shipped an embedded-spreadsheet feature for inventory and expense tracking; when direct customer conversations revealed partners wanted it native inside the POS rather than exported to Excel, rebuilt it as an in-app module, closing a gap competitors hadn't addressed.

ICICI Bank | *Product Manager: Policy Manager, Retail Assets and Lending Systems* Jul 2023 – Aug 2024 | Mumbai, India

- Applied SQL and address-level data analysis to uncover geographic clustering patterns in loan applications, then designed and shipped GeoIQ, a geospatial scoring layer for pre-approval campaigns that raised campaign approval quality by an estimated 15% with no increase in default rate (self-reported, internal team review, not independently audited).
- Owned the Business Rules Engine deciding credit eligibility, underwriting, ledger workflows, and financial transaction flows for millions of applications a year, shipping cross-functional policy changes with Risk, Engineering, and Analytics.

Kaagjaat | *Co-Founder (College Venture)* Jul 2022 – Jun 2023 | Maharashtra, India

- Co-founded and grew a bootstrapped legal-documentation venture to 50+ paying clients across Maharashtra as a solo operator, building intake, delivery, and support processes from scratch with zero additional headcount.
- Owned all business functions, including client acquisition, scope gathering, and project coordination, working directly with clients end to end and sustaining consistent monthly revenue with zero additional headcount.

The Yarn Bazaar | *Market Research Intern* Jun 2022 – Aug 2022 | Mumbai, India

- Built a buyer-supplier database through primary interviews and web scraping, saving 2 weeks of manual effort and enabling market sizing, competitive benchmarking, and business-development outreach.
- Automated data-collection pipelines, improving accuracy and team throughput by an estimated 40%; findings directly shaped pipeline prioritization and outreach targeting.

SELECTED PRODUCT INITIATIVES

Rizent AI | rizent.me

Your AI co-founder for fundraising.

- AI-driven investor outreach tool covering sourcing, personalized outreach, and CRM tracking; built solo end-to-end.

CareerOS | github.com/vbkatarnaware/careeros

Your AI co-founder for the job hunt: deterministic scoring, not spray-and-pray applications.

- Specified requirements and system architecture for an autonomous AI-agent job-search pipeline (daily discovery, JD-fit scoring, tailored resume and cover-letter generation, Google Sheet tracking); directed implementation via Claude Code.

MoatDaily | github.com/vbkatarnaware/moatdaily

A media company run by AI agents, publishing daily.

- Built and operate an autonomous Instagram content pipeline (fetch, filter, write, render, review, publish) for India-geo-targeted startup and tech news, using Playwright and Jinja2 for rendering and the Instagram Graph API to publish directly to my own account.
- Designed a two-stage publish gate, a mechanical pre-filter plus a real AI visual-quality check with retries, so nothing ships without passing both a structural and a quality bar.
- Root-caused an EC2 disk-full outage that was silently crashing the cron scheduler, then shipped both the fix and two standing safety nets (automated image pruning, a disk-usage tripwire) from the server crontab.

SKILLS

AI & Automation: Claude Code, Claude API, OpenAI API, Agentic Workflows, n8n, Prompt Engineering

Analytics: SQL, Data Analysis, Looker Studio, Google Analytics 4, Web Scraping

Product: Product Strategy, Discovery, User Research, Requirements Gathering, Product Analytics, Stakeholder Management

Growth & GTM: GTM Strategy, Acquisition and Retention, Funnel Analysis, KPI Tracking

Technical: Node.js, Supabase, Figma, Retool

EDUCATION

B.Tech, Veermata Jijabai Technological Institute (VJTI), Mumbai 7.0 CPI 2019–2023

HSC, V.G. Vaze College of Science, Arts and Commerce 73% 2016–2018

SSC, Little Flower English Convent School 87% 2015–2016
